

Powder formulations

A b s t r a c t

New powder formulations consisting of

- at least one agrochemical active compound,
- 5 • at least one copolymer of styrene and acrylonitrile with an acrylonitrile content of between 20 and 40% by weight, and,
- if appropriate, additives

and which have a particle diameter of under 125 μm ,

a process for the preparation of the new powder formulations, and their use for applying agrochemical active compounds to plants and/or their environment.
